

ABSTRACT

An indication structure for paper reserves adapted for auto document feed apparatus includes a housing, a delivered module, a support element, an elasticity
5 element, an indication element and a transparent element; wherein, the indication element includes a transmission roller, an indication roller and belt, for transmission or indication, the transparent element on which an opening of the housing is mounted. Whereby, using the simplest structure to improve higher
10 manufactured cost, process and longer time of fabrication for the conventional indication structure of paper reserves.
